# Escalation:

Our escalation process showcases how the CampusCents team responds to service failures, including the communication of these incidents and how responsibilities will be assigned.

1. **Severity Levels and Response Times**

| **Severity** | **Trigger** | **Start Fixing** | **Notify Instructor** |
|---|---|---|---|
| **Severity 1 - Critical** | Incorrect financial calculations, failed transactions synchronization, portal outage within 48 hours of a deadline | Within 2 hours initiate automatic rollback for financial discrepancies | Within 4 hours |
| **Severity 2 - Major** | A required portal page is broken | Within 24 hours | Weekly update |
| **Severity 3 - Minor** | Outdated documentation or minor issues that don't affect functionality | By the next weekly review | Only if repeated |

2. **Incident Roles and Responsibilities**

- Incident Commander [Vora, Nairuti], : Evaluates the severity of the situation, assigns responsibilities and coordinates the response.
- Fixers [Pariente, Hector and Vazquez, Francisco]: Frontend/AI Integration Lead and Backend/QA Lead. In charge of investigating and resolving technical issues.
- Communicator [Tenzin, Kinley]: Updates the team and instructor on incident status and resolution.

3. **Decision Rights**

The incident Commander determined the priorities for the incident at hand and can suspend deployments or authorize manual rollbacks. Financial discrepancies trigger the automatic rollback policy established in Target 2. Only designated fixers are authorized to modify the system during an incident.

## 4. Communication Procedure

All incidents will be documented in the team's issue log. Severity 1 incidents require immediate notification, instructor notification within 4 hours and team status updates every 2 hours until resolved.

Severity 2 incidents will be included in the weekly instructor update. Severity 3 incidents will be reviewed during regular team meetings and escalated if they become recurring problems.
